Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("*");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                printf("*");
                printf("*");
                break;
            }
        }
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```
1  #include<stdio.h>
2  int main(){
3      int n;
4      int count=0;
5      scanf("%d",&n);
6      if(n==1){
7          count++;
8          count++;
9      }
10     }
11     else{ count++;
12         for(int i=1;i<=n;i++){
13             count++;
14             for(int j=1;j<=n;j++){
15                 count++;
16                 count++;
17                 count++;
18                 break;
19             }
20         }
21     }
22     }count++;
23     }
24     count++;
25     }
26     printf("%d",count);
27 }
28 }
```

```

{
    for(int j=1; j<=n; j++)
    {
        printf("*");
        printf("*");
        break;
    }
}
}
}

```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer: (penalty regime: 0 %)

```

1  #include<stdio.h>
2  int main(){
3      int n;
4      int count=0;
5      scanf("%d",&n);
6      if(n==1){
7          count++;
8          count++;
9      }
10     }
11     else{ count++;
12         for(int i=1;i<=n;i++){
13             count++;
14             for(int j=1;j<=n;j++){
15                 count++;
16                 count++;
17                 count++;
18                 break;
19             }
20         }
21         }count++;
22     }
23     count++;
24 }
25 printf("%d",count);
26 }
27 }
28 }

```
