Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
    int rev = 0, remainder;
    while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n /= 10;
    }
    print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
1 #include<stdio.h>
2 int main(){
3     int rev = 0;
4
5     int n,rem;
6     scanf("%d",&n);
7     int count=3;
8     while (n != 0)
9     {
10         count+=4;
11         rem = n % 10;
12         rev = rev * 10 + rem;
13         n /= 10;
14     }
15
16     printf("%d",count);
17 }
```

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
    int rev = 0, remainder;
    while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;
    }
    print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```
1 #include<stdio.h>
2 int main(){
3     int rev = 0;
4
5     int n,rem;
6     scanf("%d",&n);
7     int count=3;
8     while (n != 0)
9     {
10         count+=4;
11         rem = n % 10;
12
13         rev = rev * 10 + rem;
14
15         n/= 10;
16
17     }
18
19     printf("%d",count);
20 }
```
